

**K. Lokesh Chandra**

**192425358**

**Ex. No.: 5**

**Date:**

**AIM**

**To retrieve records from the Hospital Management System tables using the SELECT statement with WHERE clause and Pattern Matching (LIKE).**

### **DESCRIPTION**

The **SELECT** statement is used to retrieve data from one or more tables. It can be used with clauses like **WHERE**, **ORDER BY**, **GROUP BY**, and **LIKE** to filter and display specific records.

### **SYNTAX**

#### **SELECT**

SELECT column\_name(s)

FROM table\_name;

#### **SELECT with WHERE**

SELECT column\_name(s)

FROM table\_name

WHERE condition;

#### **SELECT with LIKE**

SELECT column\_name(s)

FROM table\_name

WHERE column\_name LIKE 'pattern';

## Questions

### WHERE Clause

#### 1. Display the Patient ID, Patient Name and Date of Birth of all patients.

SELECT PatientID, PatientName, DOB

FROM PATIENT;

The screenshot shows a SQL editor window with the following query:

```
62 SELECT DoctorID
63 FROM DOCTOR
64 WHERE Experience>15
65 );
66 DELETE FROM DOCTOR
67 WHERE Experience>15;
68 SELECT * FROM DOCTOR;
69 SELECT PatientID, PatientName, DOB
70 FROM PATIENT;
```

The result grid below the query shows the following data:

| PatientID | PatientName | DOB        |
|-----------|-------------|------------|
| 101       | Rohan       | 2002-05-10 |
| 102       | Anitha      | 2001-11-15 |
| 103       | Karthik     | 2003-08-20 |
| NULL      | NULL        | NULL       |

#### 2. Display all female patients.

SELECT \*

FROM PATIENT

WHERE Gender='F';

The screenshot shows a SQL editor window with the following query:

```
65 );
66 DELETE FROM DOCTOR
67 WHERE Experience>15;
68 SELECT * FROM DOCTOR;
69 SELECT PatientID, PatientName, DOB
70 FROM PATIENT;
71 SELECT *
72 FROM PATIENT
73 WHERE Gender='F';
```

The result grid below the query shows the following data:

| PatientID | PatientName | Gender | DOB        | MobileNo   | City       |
|-----------|-------------|--------|------------|------------|------------|
| 102       | Anitha      | F      | 2001-11-15 | 9876543211 | Coimbatore |
| NULL      | NULL        | NULL   | NULL       | NULL       | NULL       |

### 3. List the patients who have appointments with Doctor ID 201.

```
SELECT *  
FROM APPOINTMENT_DETAILS  
WHERE DoctorID=201;
```

The screenshot shows a SQL File 3\* window with a query and its result grid. The query is:

```
68 • SELECT * FROM DOCTOR;  
69 • SELECT PatientID, PatientName, DOB  
70 FROM PATIENT;  
71 • SELECT *  
72 FROM PATIENT  
73 WHERE Gender='F';  
74 • SELECT *  
75 FROM APPOINTMENT_DETAILS  
76 WHERE DoctorID=201;
```

The result grid shows the following data:

| AppointmentID | PatientID | DoctorID | AppointmentDate | AppointmentTime | RoomNo |
|---------------|-----------|----------|-----------------|-----------------|--------|
| 1             | 101       | 201      | 2026-08-05      | 10:00:00        | 25     |

### 4. Display all doctors having more than 8 years of experience.

```
SELECT *  
FROM DOCTOR  
WHERE Experience>8;
```

The screenshot shows a SQL File 3\* window with a query and its result grid. The query is:

```
71 • SELECT *  
72 FROM PATIENT  
73 WHERE Gender='F';  
74 • SELECT *  
75 FROM APPOINTMENT_DETAILS  
76 WHERE DoctorID=201;  
77 • SELECT *  
78 FROM DOCTOR  
79 WHERE Experience>8;
```

The result grid shows the following data:

| DoctorID | DoctorName | Gender | Specialization | MobileNo   | Experience |
|----------|------------|--------|----------------|------------|------------|
| 201      | Dr. Kumar  | M      | Cardiology     | 9876501111 | 15         |

## 5. Display all appointments allotted to Room No. 21.

```
SELECT *  
FROM APPOINTMENT_DETAILS  
WHERE RoomNo='21';
```

## LIKE Operator

## 6. Display patients whose names end with "th".

```
SELECT *  
FROM PATIENT  
WHERE PatientName LIKE '%th';
```

## 7. Display patients whose names contain "an".

SELECT \*

FROM PATIENT

WHERE PatientName LIKE '%an%';

The screenshot shows a database application interface with three tabs: "SQL File 3\*", "SQL File 3\*", and "SQL File 4\*". The SQL editor displays the following queries:

```
80 • SELECT *
81 FROM APPOINTMENT_DETAILS
82 WHERE RoomNo='21';
83 • SELECT *
84 FROM PATIENT
85 WHERE PatientName LIKE '%th';
86 • SELECT *
87 FROM PATIENT
88 WHERE PatientName LIKE '%an%';
```

The "Result Grid" shows the results of the third query. It has columns: PatientID, PatientName, Gender, DOB, MobileNo, and City. The data is as follows:

| PatientID | PatientName | Gender | DOB        | MobileNo   | City       |
|-----------|-------------|--------|------------|------------|------------|
| 101       | Rohan       | M      | 2002-05-10 | 9876543210 | Chennai    |
| 102       | Anitha      | F      | 2001-11-15 | 9876543211 | Coimbatore |
| NULL      | NULL        | NULL   | NULL       | NULL       | NULL       |

The interface also includes a "Filter Rows" field, an "Edit" button, an "Export/Import" button, and a "Wrap Cell Content" button. The bottom status bar shows "APPOINTMENT\_DETAILS 234", "DOCTOR 235", "APPOINTMENT\_DETAILS 236", "PATIENT 237", and buttons for "Apply" and "Revert".

## 8. Display patients living in cities containing "nai".

SELECT \*

FROM PATIENT

WHERE City LIKE '%nai%';

The screenshot shows the same database application interface. The SQL editor displays the following queries:

```
83 • SELECT *
84 FROM PATIENT
85 WHERE PatientName LIKE '%th';
86 • SELECT *
87 FROM PATIENT
88 WHERE PatientName LIKE '%an%';
89 • SELECT *
90 FROM PATIENT
91 WHERE City LIKE '%nai%';
```

The "Result Grid" shows the results of the third query. It has columns: PatientID, PatientName, Gender, DOB, MobileNo, and City. The data is as follows:

| PatientID | PatientName | Gender | DOB        | MobileNo   | City    |
|-----------|-------------|--------|------------|------------|---------|
| 101       | Rohan       | M      | 2002-05-10 | 9876543210 | Chennai |
| NULL      | NULL        | NULL   | NULL       | NULL       | NULL    |

The interface also includes a "Filter Rows" field, an "Edit" button, an "Export/Import" button, and a "Wrap Cell Content" button. The bottom status bar shows ".S 249", "DOCTOR 250", "APPOINTMENT\_DETAILS 251", "PATIENT 252", "PATIENT 253", and buttons for "Apply" and "Revert".

### 9. Display patients whose names do not contain six letters.

```
SELECT *  
FROM PATIENT  
WHERE PatientName NOT LIKE '_____';
```

The screenshot shows a database application interface with three tabs: 'SQL File 3\*', 'SQL File 3\*', and 'SQL File 4\*'. The SQL editor displays three queries. The first query filters patients by name length (6 letters). The second query filters patients by city (4 letters). The third query filters patients by name length (6 letters). The result grid shows the following data:

| PatientID | PatientName | Gender | DOB        | MobileNo   | City    |
|-----------|-------------|--------|------------|------------|---------|
| 101       | Rohan       | M      | 2002-05-10 | 9876543210 | Chennai |
| 103       | Karthik     | M      | 2003-08-20 | 9876543212 | Madurai |
| *         | NULL        | NULL   | NULL       | NULL       | NULL    |

### 10. Display doctors whose names contain "ar".

```
SELECT *  
FROM DOCTOR  
WHERE DoctorName LIKE '%ar%';
```

The screenshot shows a database application interface with three tabs: 'SQL File 3\*', 'SQL File 3\*', and 'SQL File 4\*'. The SQL editor displays three queries. The first query filters patients by name length (6 letters). The second query filters patients by city (4 letters). The third query filters doctors by name containing 'ar'. The result grid shows the following data:

| DoctorID | DoctorName | Gender | Specialization | MobileNo   | Experience |
|----------|------------|--------|----------------|------------|------------|
| 201      | Dr. Kumar  | M      | Cardiology     | 9876501111 | 15         |
| *        | NULL       | NULL   | NULL           | NULL       | NULL       |

## **Result**

The records were successfully retrieved from the Hospital Management System tables using the SELECT statement with WHERE clause and LIKE operator.
